| | Z | 3.3 | 3.38 | 3.45 | mm |
| Packaging | LCC20 pin housing | | | | |
| Proximity effect | The sensor is sensitive to external parasitic capacitance. Moving metallic objects with large mass or parasitic effect in close proximity of the accelerometer (mm range) must be avoided to ensure best product performances. A ground plane below the accelerometer is recommended as a shielding. | | | | |
| Reference plane for axis alignment | LCC must be tightly fixed to the circuit board, using the bottom of the housing as the reference plane for axis alignment. Using the lid as reference plane or for assembly may affect specifications and product reliability (i.e. axis alignment and/or lid soldering integrity) | | | | |
